Number of Characters	194,630
Number of Comments	541
Number of Constructors	22
Number of Fields	168
Number of Lines	6,685

Average Cyclomatic Complexity

This is the average of the cyclomatic complexity of each of the methods defined in the target elements. The cyclomatic complexity of a single method is a measure of the number of distinct paths of execution within the method. It is measured by adding the one path for the method with each of the paths created by conditional statements (such as "if" and "for") and operators (such as "?").
